Re: Disclosure statement on "New Estimates of the Value of a Statistical Life Using Air Bag Regulations as a Quasi-Experiment"

(1) Every submitted article should state the sources of financial support for the particular research it describes. If none, that fact should be stated.

The project was funded primarily by National Institute on Aging Grant Number 1 R03 AG 031371-01A2, "Estimates of the Value of Life Using Air Bags as a Quasi-Experiment," for which Christopher Rohlfs was the Principal Investigator. The total amount of the grant was $119,720, and the grant period lasted from August 2008 through July 2011. The money was used to pay for access to proprietary datasets, for RA work, and for the Principal Instigator's labor hours (summer months). Syracuse University also provided $10,000 of funding in June 2007 for the purchase of some of the data used in this project.

(2) Each author of a submitted article should identify each interested party from whom he or she has received significant financial support, summing to at least $10,000 in the past three years, in the form of consultant fees, retainers, grants and the like. The disclosure requirement also includes in-kind support, such as providing access to data. If the support in question comes with a non-disclosure obligation, that fact should be stated, along with as much information as the obligation permits. If there are no such sources of funds, that fact should be stated explicitly. An "interested" party is any individual, group, or organization that has a financial, ideological, or political stake related to the article.

Syracuse University provided $10,000 for the purchase of data (in 2007) and the National Institute of Aging (of NIH) provided $119,720 of grant funding in two installments (2008 and 2009). There is no non-disclosure obligation with either of these parties, and in both cases, the funds were received more than three years ago.

(3) Each author should disclose any paid or unpaid positions as officer, director, or board member of relevant non-profit organizations or profit-making entities. A "relevant" organization is one whose policy positions, goals, or financial interests relate to the article.

There are no such positions to disclose.

(4) The disclosures required above apply to any close relative or partner of any author.

There are no such positions to disclose.

(5) Each author must disclose if another party had the right to review the paper prior to its circulation.

As a part of the data-sharing licenses, two of the data providers, Kelley Blue Book and R.L. Polk, had the right to review the paper to ensure that it did not reveal any proprietary information or infringe upon any trademarks. Representatives from both companies have approved the paper in its current form.

(6) **This project does not involve primary data collection or the use of personally identifying information and thus is not subject to Institutional Review Board review at Naval Postgraduate School.**
