Journal of Economic Perspectives, Fall 2018
Figure 1: Average temperatures for 166 countries observed during 1981–2010 (blue, lower panel) and projected for 2080–2099 in a high emission (RCP 8.5) scenario (red, top panel). Data is population-weighted annual average temperatures from Burke et al. (2015), same as Figure 4B from the main text but for all countries. Markers indicate countries using ISO 3 country codes and are vertically jittered for readability. Figure design is adapted from Houser et al. (2015).
